

Ultra Scissor jacks,

The Ultra Scissor Jacks are rated at 5000 #.

They install easily, collapse to a minimum of 4 ³/₄ inches and extend to a maximum of 24 inches. We have a 3 x 10 mounting plate, with a 5 x 9 foot pad.

A hand crank is included with the purchase of a two pack, none with a single jack.

It is assumed that the purchase of a single jack is for a single repair, and that you would have a crank.

We do “not” provide installation hardware or instructions. The jacks are usually installed by OEM's or dealerships where the techs have the experience and proper tools and equipment for a quick install. Some of the jacks are secured to the trailer by welding, while others are secured with self tapping screws.
